

The figure is a scatter plot with 'Active Variable 1' on the x-axis, ranging from -1.0 to 1.0. The y-axis is unlabeled but ranges from 0 to 1.0. The data points are colored in a gradient from dark purple to yellow. The plot shows a complex, non-linear relationship, with points forming a shape that resembles a stylized 'S' or a distorted figure-eight. The points are distributed across the plot area, with a higher density in the upper half (y > 0.5) and a lower density in the lower half (y < 0.5). The color gradient suggests a third variable, possibly a time series or a parameter, that changes as the data points move through the space.
